About Source Code Pro:

Source Code Pro is a font created in 2012 by Paul D. Hunt under the Adobe Originals classification. Ideally, this font was created to perform best in situations of computer coding. Each letter is designed and separated to be individually unique for coders and programmers to utilize when writing or editing files. Versions of this font are optional alternatives to defaults within systems like Windows Powershell, among others.

1.

2.

3.

1. Source Code Pro is a Mono-space font, meaning that all characters are based within and given the same space size.
2. This font is sans-serif, or does not have serif lines at the edges of the characters. This is for readability in coding. However, some characters are given details like the “i” so that it can be understood as such instead of an “l”.
3. Again for readability, the number zero is stylized with a circle in its center to discern between that and the letter “o”.
